The Mega PC is a computer manufactured and released by Amstrad in 1993 under license from Sega. It was similar but unrelated to the Sega TeraDrive. It is a standard Amstrad PC with Sega Mega Drive hardware bundled inside; the system was wired to share the dual-sync monitor and speakers with the Mega Drive on a separate circuit board.

## Amstrad Mega PC - Console Gaming in an IBM-PC Compatible ...

The Mega PC unlike the console was region free, which meant you could play JAP and US games through the computer. I have to admit, playing Mega Drive games on the Amstrad PC was a revelation at the time, especially when you consider the crystal clear VGA display! The bad bits: Due to some unforeseen non-standard Mega Drive cartridges, around 5% of games suffered in the compatibility department. For example; Mega Probotector and Populus couldn't run without open heart case modification.

## The Amstrad Mega PC - 1992-93 - Classic Replay

The Amstrad had several games installed also, including some great mech game (top down) and an early version of Elite. It came with 1mb of ram, I remember this because we bought the pc version of mortal kombat and had to upgrade it to 4mb to get it working.

## Amstrad Mega PC : retrobattlestations

Amstrad's final PC product was the unusual Amstrad Mega PC which also had a Sega Megadrive built in. Today the Amstrad PC1512 and PC1640 are quite collectible, with prices going up to £650 (€720) or so for a top-of-
