The boy's name is Sean, but that's not what he means. What he means is that he is Sean and that when Sean died while jogging in Central Park, he was reborn and now here he stands, age 10. Since the first two scenes of "Birth" show the death and the birth, we're prepared for the reincarnation.

The internationally known French physician and head of the Pithiviers Maternity Clinic in northern France explains his revolutionary natural childbirth methods, which result in some of the lowest infant mortality figures in the world

In Birth Reborn Michel Odent outlines the choices available to the mother who wants to give birth naturally, in her own way and with full control over her own body, drawing on his decades of experience as an obstetrician who dealt with 1,000 births a year. It is central to his philosophy that birth is instinctive, and that an environment that promotes intimacy and creativity is essential in the experience of birth, and that the role of the midwife must be key to the mother's experience. Michel Odent has returned birth to how it should be. Birth Reborn gives expectant mothers the confidence and information they need in order to trust themselves to give birth without the drugs and medical procedures that are being increasingly recognised as harmful to the mother and to the baby's future development.

Humanity, argues Michel Odent, stands at a crossroads in the history of childbirth - and the direction we choose to take will have critical consequences. Until recently a woman could not have had a baby without releasing a complex cocktail of 'love hormones'. In many societies today, most women give birth without relying on the release of such a flow of hormones. Some give birth via caesarean section, while others use drugs that not only block the release of these natural substances, but do not have their beneficial behavioural effects. 'This unprecedented situation must be considered in terms of civilization', says Odent, and gives us urgent new reasons to rediscover the basic needs of women in labour. At a time when pleas for the 'humanization' of childbirth are fashionable, the author suggests, rather, that we should first accept our 'mammalian' condition and give priority to the woman's need for privacy and to feel secure. The activity of the intellect, the use of language, and many cultural beliefs and rituals - which are all special to humans - are handicaps in the period surrounding birth. Says Odent: 'To give birth to her baby, the mother needs privacy. She needs to feel unobserved. The newborn baby needs the skin of the mother, the smell of the mother, her breast. These are all needs that we hold in common with the other mammals, but which humans have learned to neglect, to ignore or even deny.' Expectant parents, midwives, doulas, childbirth educators, those involved in public health, and all those interested in the future of humanity, will find this a provocative and visionary book.

'After the historic student revolt in France a period of audacious creativity resulted. The watchword was: "It is forbidden to forbid". We took advantage of this transient cultural folly to do what would have been impossible ten years before or ten years after, introducing in the maternity unit of a state hospital an inflatable outdoor pool as a way to replace drugs during birth.' - from the Introduction In this groundbreaking book, Dr Odent takes as his starting point the world-famous work on childbirth at Pithiviers, where he first noticed the strong attraction to water that many women have during labour. As well as discovering the practical advantages of water during the birthing process, he began to consider the meaning and importance of water as a symbol. Water, Birth and Sexuality examines the living power of water and its erotic connotations. Odent evaluates what water meant in different cultures throughout history, through myths and legends, and what it means for us today: from an advertiser's tool to a metaphor for aspects of the psyche. He also studies humanity's special relationship to dolphins, and the related 'aquatic ape' theory. A practical section on the use of water during birth and in various therapies, particularly sex therapy, is included. This edition of this classic work features a new Introduction.

In his latest wide-ranging survey of current scientific thinking, revolutionary thinker and birth pioneer Michel Odent proposes that we view the genus Homo as a 'marine chimpanzee', with consequences for every area of human development and experience.

This book explores some of the many similarities and parallels between the birth and death process. It does not rely on the testimony of people who have had near death experiences. Neither does it base its argument on the kind of mystical experience that is not available to most people. The exploration of this material requires only the active critical participation of the reader. Therefore, neither faith nor the testimony of some authority is necessary; only the willingness to suspend judgment until the deeper resources of ones own experience can be critically examined. My view is that in many ways culture in the West has it upside down and backwards. In my own small way, I am trying to counteract a cultural bias, that in its narrow definition of wisdom, has virtually nothing to say about soul cultivation and the process of dying to be reborn.

Michel Odent, the leading pioneer for natural childbirth, indicates that the period between conception and a child 's first birthday is critical to life-long health. In this prophetic book - first published in 1986 and reproduced here in its original form - he argues that different parts of the ' primal adaptive system ' develop, regulate and adjust themselves during foetal life and the time around birth and infancy. ' Everything which happens during this period of dependence on the mother has an influence on this basic state of health, this primal health. ' He suggests that the later well-being of adults, their ability to withstand the ' diseases of civilization ' such as hypertension, cancer, alcoholism and failures of the immune system resulting in AIDS, allergies and viral diseases, can all be traced back to society ' s ignorance of the vital importance of the primal period. Since the first edition of this groundbreaking work, research has continued apace, offering further evidence to substantiate Odent ' s ideas. In the important new Introduction and Postscript, the author reviews recent developments and relates them to the central themes of Primal Health. This book is essential reading for all who care about the health of our children and the ongoing health of society as a whole.

'Fetus ejection reflex, 'milk ejection reflex, 'Sperm ejection reflex, 'Orgasmogenic cocktail'... These are examples of terms used by Michel Odent in his study of the ecstatic/orgasmic states associated with different episodes of human sexual life.

Is natural painless childbirth a myth or reality? The intent of the book is neither to give universal guidelines nor to compete with the work and methods of Midwives, doulas or other related professions. You won't even find recommendations concerning diet or physical exercise here. Those are pieces of information that you can read in books written by many outstanding authors. The purpose of the book is to pass on personal experience, to show a slightly different point of view and to introduce pregnancy and birth as the woman's work on her own personal development. We are all holding the birth pain as well as the whole experience of birth in our own hands. Based on personal experience and story. "The book should be welcomed as a golden opportunity to reinforce the power modern physiology has to challenge thousands of years of cultural conditioning. It can help us to be aware of a sudden paradigm shift regarding our understanding of the birth process and particularly our interpretation of labour pain." From the foreword by Michel Odent, M.D. (author of 13 books including Birth Reborn, Chidbirth and the Future of Homo Sapiens)

A pioneer in the childbirth movement for thirty years provides insights into society and human behavior, arguing the value of mother-child bonding through home birth and breastfeeding
