Evaluation Methods.

Software architecture evaluation is the analysis of a system's capability to satisfy the most important stakeholder concerns, based on its large-scale design, or architecture (Clements et al., 2002). On the one hand, the analysis discovers potential

# Download File PDF Can

risks and areas for improvement; on the other hand, it can raise confidence in the chosen architectural approaches.

Software Architecture  
& Design Introduction  
- Tutorialspoint

Software architecture  
evaluation methods  
can be divided into  
four main categories,  
i.e., experience-based,  
simulation-based,  
mathematical  
modeling based.  
Methods in the  
categories can be

Download File

PDF Can

used independently but also be combined to evaluate different aspects of software architecture, if needed.
