A brief overview of the basic science and clinical aspects of immunology. The basic science section is a clear presentation of innate and adaptive immunity, immune cells, antibodies and antigens, and other components of the immune system and their interactions. The clinical section clarifies hypersensitivity, autoimmunity, immunodeficiency, common diagnostic tests, vaccination, transplantation, and tumor immunology.

Provides a conceptual overview of pathophysiology and mechanisms of disease, designed to ease the transition from the basic sciences to the clinical years. This book will be a phenomenal learning tool for students in the second and third years of medical school and during USMLE Step 1 preparation, but will also be very helpful to nurses, nurse practitioners, physician assistants, and other health care professionals seeking to learn or review the physiological mechanisms of diseases, their diagnosis, and their management. The accompanied CD, Differential Diagnosis, allows one to select a symptom, sign, or lab finding and see all of the many diseases that could cause it, classified by pathophysiological mechanism. By teaching basic medical science and clinical reasoning hand-in-hand in a simple, light, and highly accessible writing style, this book provides an integrated and easy-to-understand approach to learning the science of medicine.

This text is written in a conversational style for rapid assimilation; includes numerous figures and summary charts at the end of each chapter; concentrates on clinical and infectious disease issues; and is organized to promote learning based on logical pathophysiology.

An up-to-date, clear, clinically oriented, and enjoyable review for all students of pathology and pathophysiology. Contains numerous humorous figures, mnemonics, and useful tables along with clinicopathologic correlation, molecular and genetic bases of disease, and high-yield knowledge for medical exams (e.g. USMLE Step 1 and others). An accompanying CD compares pathology with normal histology through many color images, with links to the Internet for additional images and information.
