Microwave Engineering is a vast subject with topics ranging from semiconductor physics to electromagnetic theory. The book covers the microwave and RF engineering topics from an Electronic Design Automation (EDA) approach. The topics includes RF and microwave concepts and components, transmission lines, network parameters, maximum power transfer requirements, lumped and distributed impedance matching, and several linear amplifier designs.

Microwave and RF Engineering- A Simulation Approach with ...

RF and Microwave Engineering is a part of the subcategory of Electrical Engineering. The specialists in RF and Microwave Engineering design, construct and operate the devices that transmit or receive radio waves. The objects in this field include radios, mobile phones, wireless equipment, and some other objects.

Microwave and RF Engineering presents up-to-date research and applications at different levels of difficulty, creating a useful tool for a first approach to the subject as well as for subsequent in-depth study. It is therefore indispensable reading for advanced professionals and designers who operate at high frequencies as well as senior students who are first approaching the subject.

A review of the dielectric loss spectra of polymers at microwave frequencies has been carried out. While the main focus of attention is the frequency range from 100 MHz to 100 GHz, loss spectra outside this region are also reviewed because variations in temperature can cause a shift of dielectric loss into or out of the microwave range.
