The types categorized by Carl Jung are present in all of us. But, certain types are predominant over the normal mode of organizing our experience. Carl Jung also developed a theory of personality. His theory is one of the type theories of personality, as it involved typology of introversion and extroversion.

Carl Jung Personality Theory - PsycheStudy

The theory of psychological type comes from Swiss psychiatrist Carl G. Jung (1875-1961) who wrote that what appears to be random behavior is actually the result of differences in the way people prefer to use their mental capacities. He observed that people generally engage in one of two mental functions:

The Myers & Briggs Foundation - C G Jung's Theory

Several pop psychology theories (e.g., Men Are From Mars, Women Are From Venus, the enneagram) rely on the idea of distinctively different types of people. Carl Jung. One of the more influential ideas originated in the theoretical work of Carl Jung as published in the book Psychological Types.

Personality type - Wikipedia

For Jung, our primitive past becomes the basis of the human psyche, directing and influencing present behavior. Jung claimed to identify a large number of archetypes but paid special attention to four. Jung labeled these archetypes the Self, the Persona, the Shadow and the Anima/Animus.

Carl Jung | Simply Psychology

One learning style theory is based on the work of analytical psychologist Carl Jung, who developed a theory of psychological types designed to categorize people in terms of various personality patterns. 2 Jung's Theory of Personality Types Jung's theory focuses on four basic psychological functions:

Jung's Theory of Personality and Learning Styles

Carl Gustav Jung is perhaps the most famous dissident of classic psychoanalysis. He strayed away from Freudian ideas and explored ancestral roots and the collective unconscious and had many revolutionary ideas. One of them was the 12 Jungian archetypes of personality. To define his 12 archetypes of personality, Jung studied the symbols and myths of many different cultures.

The 12 Jungian Archetypes - Psychology - Exploring your mind

Jung divided the eight personality types into four types of introvert and four types of extravert, based on whether they were thinking vs. feeling and sensing vs. intuitive.

Carl Jung on the Eight Personality Types

Carl jung was initially influenced by Freud, but later he choose a different route. It led to the development of the Myers-Briggs personality test. Jung's personality theory was actually invented to demonstrate the complexity personality of human and its consequences. It was actually developed to label people based on their personality types.

Jung's personality theory Explained- 4 functions and 8 types

According to Carl G. Jung's theory of psychological types (Jung, 1971), people can be characterized by their preference of general attitude: Extraverted (E) vs. Introverted (I), their preference of one of the two functions of perception: Sensing (S) vs. Intuition (N), and their preference of one of the two functions of judging:

Take this free Jung personality test and find out what psychological type you are according to Jung types. This test measures concepts similar to the MBTI® (Myers/Briggs Type Indicator®) model, originally developed by Katharine Cook Briggs and her daughter Isabel Briggs Myers.

Classic work in which the Swiss psychologist categorizes human behavior into attitude-types of introversion and extroversion as well as function-types distinguished by thinking, feeling, sensation, or intuition

"First published by Routledge & Kegan Paul Ltd in 1971."

In this classic work, originally published in 1921, Jung categorized people into primary types of psychological function. He proposed four main functions of consciousness: Two perceiving functions: Sensation and Intuition Two judging functions: Thinking and Feeling The functions are modified by two main attitude types: extraversion and introversion. Jung theorized that the dominant function characterizes consciousness, while its opposite is repressed and characterizes unconscious behavior. The eight psychological types are as follows: Extraverted sensation Introverted sensation Extraverted intuition Introverted intuition Extraverted thinking Introverted thinking Extraverted feeling Introverted feeling In "Psychological Types," Jung describes in detail the effects of tensions between the complexes associated with the dominant and inferior differentiating functions in highly and even extremely one-sided types.

Psychological Types is one of Jung's most important and most famous works. First published by Routledge (Kegan Paul) in the early 1920s it appeared after Jung's so-called fallow period, during which he published little, and it is perhaps the first significant book to appear after his own confrontation with the unconscious. It is the book that introduced the world to the terms 'extravert' and 'introvert'. Though very much associated with the unconscious, in Psychological Types Jung shows himself to be a supreme theorist of the conscious. In putting forward his system of psychological types Jung provides a means for understanding ourselves and the world around us: our different patterns of behaviour, our relationships, marriage, national and international conflict, organizational functioning. Appearing in paperback for the first time this central volume from Jung's Collected Works will be essential to anyone requiring a proper understanding of Jung's psychology.

Jung's model of typology is the basis for type tests widely used in business and university, including the Myers-Briggs Type Indicator (MBTI). This book explains in detail Jung's views on the psychological attitudes of introversion and extroversion, the functions of feeling, thinking, sensation and intuition, and the pesky role of the unconscious. Includes an essay by H.K. Fierz, "The Clinical Significance of Extraversion and Introversion". Diagrams.

Psychological Types is one of Jung's most important and famous works. First published in English by Routledge in the early 1920s it appeared after Jung's so-called fallow period, during which he published little, and it is perhaps the first significant book to appear after his own confrontation with the unconscious. It is the book that introduced the world to the terms 'extravert' and 'introvert'. Though very much associated with the unconscious, in Psychological Types Jung shows himself to be a supreme theorist of the conscious. In putting forward his system of psychological types Jung provides a means for understanding ourselves and the world around us: our different patterns of behaviour, our relationships, marriage, national and international conflict, organizational functioning. This Routledge Classics edition includes a new foreword by John Beebe.

Jung was intrigued from early in his career with coincidences, especially those surprising juxtapositions that scientific rationality could not adequately explain. He discussed these ideas with Albert Einstein before World War I, but first used the term "synchronicity" in a 1930 lecture, in reference to the unusual psychological insights generated from consulting the I Ching. A long correspondence and friendship with the Nobel Prize-winning physicist Wolfgang Pauli stimulated a final, mature statement of Jung's thinking on synchronicity, originally published in 1952 and reproduced here. Together with a wealth of historical and contemporary material, this essay describes an astrological experiment Jung conducted to test his theory. Synchronicity reveals the full extent of Jung's research into a wide range of psychic phenomena. This paperback edition of Jung's classic work includes a new foreword by Sonu Shamdasani, Philemon Professor of Jung History at University College London.

In 1915, C.G. Jung and his psychiatrist colleague, Hans Schmid-Guisan, began a correspondence through which they hoped to understand and codify fundamental individual differences of attention and consciousness. This correspondence, available in English for the first time, reveals Jung fielding keen theoretical challenges form one of his most sensitive and perceptive colleagues.

In the book Jung categorized people into primary types of psychological function. He proposed four main functions of consciousness: Two perceiving functions: Sensation and Intuition Two judging functions: Thinking and Feeling The functions are modified by two main attitude types: extraversion and introversion. Jung theorized that the dominant function characterizes consciousness, while its opposite is repressed and characterizes unconscious behavior.
