123 GO! CHALLENGE The Precaution Adoption Process Model

The precaution adoption process model (PAPM) is a psychologically focused model that is most useful in describing how a person comes to a new decision, and how that person can take the decision and make it become an action. The concepts of the model were first discussed in 1988, with a formal accepted formulation of the model coming in 1992 (Weinstein and Sandman, 2002).

...

We present the precaution adoption process model--a stage theory consisting of seven distinct states between ignorance and completed preventive action. The stages are "unaware of the issue," "aware of the issue but not personally engaged," "engaged and deciding what to do," "planning to act but not yet having acted," "having decided not to act," "acting," and "maintenance."
