Web Services Security (WS Security) is a specification that defines how security measures are implemented in web services to protect them from external attacks. It is a set of protocols that ensure security for SOAP-based messages by implementing the principles of confidentiality, integrity and authentication.

~~Web Services Security (WS Security) Definition from ...~~

Web Services Security (WS-Security, WSS) is an extension to SOAP to apply security to Web services. It is a member of the Web service specifications and was published by OASIS . The protocol specifies how integrity and confidentiality can be enforced on messages and allows the communication of various security token formats, such as Security Assertion Markup Language (SAML), Kerberos , and X.509 .

~~WS Security - Wikipedia~~

Security is critical to web services. However, neither XML-RPC nor SOAP specifications make any explicit security or authentication requirements. There are three specific security issues with web services ? Confidentiality; Authentication; Network Security; Confidentiality

~~Web Services - Security - Tutorialspoint~~

The following summarize the Web service security requirements: The use of transport security to protect the communication channel between the Web service consumer and Web service... Message-level security to ensure confidentiality by digitally encrypting message parts; integrity using digital...

~~Understanding Web Services Security Concepts~~

Web Services Security (WSS or WS-Security) describes enhancements to SOAP messaging in order to provide quality of protection through message integrity, and single message authentication. These mechanisms can be used to accommodate a wide variety of security models and encryption technologies.

~~Web Services Security (WSS)~~

WS Security is a standard that addresses security when data is exchanged as part of a Web service.This is a key feature in SOAP that makes it very popular for creating web services. Security is an important feature in any web application.

~~Web Service(WS) Security Tutorial with SOAP Example~~

Security is a critical, yet often overlooked aspect of Web services development. Consider these requirements when working with your next project. No matter how big your company is or what it does,...

~~Top 10 Web service security requirements - TechRepublic~~

In order to defend the data processed by web services and the availability of web services themselves security features need to be applied. The WS-Security standard defines such features. Most of the common web service frameworks support the "WS-Security" standard right away, for example Apache CXF.

AWS Cloud Security Infrastructure and services to elevate your security in the cloud Raise your security posture with AWS infrastructure and services. Using AWS, you will gain the control and confidence you need to securely run your business with the most flexible and secure cloud computing environment available today.

~~Cloud Security - Amazon Web Services (AWS)~~

Web services need to authorize web service clients the same way web applications authorize users. A web service needs to make sure a web service client is authorized to perform a certain action (coarse-grained) on the requested data (fine-grained). Rule: A web service should authorize its clients whether they have access to the method in question. Following authentication, the web service should check the privileges of the requesting entity whether they have access to the requested resource.

~~Web Service Security - OWASP Cheat Sheet Series~~

Robust XML Web Services security is built on a strong foundation of transport layer security so that sensitive information cannot be intercepted and read in transit. SSL VPNs are easy to deploy and...

~~Web Services Security (Application Development) - Amazon.co.uk~~

Web service security is a set of instructions that define how web services are protected from external attacks. For example, web services such as entering passwords or monetary transactions are protected through confidentiality, integrity and authentication. Web service security applies these instructions to the header of SOAP-based messages.

~~Web Service Security | Akamai~~

Security has always been a top issue for all kinds of applications, especially Web applications. Web apps are accessible to almost the entire universe and are open to attack. Web Services is a current hot topic because of its interoperability, ease of consumption, use of standard Web protocols, seamless integration with heterogeneous systems, etc.

~~Web Services Security in The .NET Framework~~

Symantec Web Security Service (WSS) is an indispensable line of defense against modern day cyber threats. It provides secure web services, enables enterprises to control access, protects users from threats, and secures their sensitive data. Your Data and Apps Are Moving to the Cloud - So Can Your Security

~~Web Security Service - Broadcom Inc.~~

Web application programming interfaces (APIs) provide the back end for modern web and mobile applications. Web API calls account for over 80% of all web traffic and cybercriminals are increasingly targeting APIs, so ensuring web API security is crucial. REST APIs are the most common type of web API for web services.

~~How to Ensure REST API Security | NetSparker~~

Web services use a standardized XML messaging system that is easily available over the internet or private networks. Web services are a very vast topic. This includes its architecture, components like Simple Object Access Protocol (SOAP), Web Services Description Language (WSDL), RESTful web services, Web services security, etc.

~~Top 45 Web Services Interview Question and Answer~~

The interface has one function called GetPassword, taking a Microsoft.Web.Services.Security.UsernameToken as an input argument. The task of GetPassword is to return the password related to the user name given in the UsernameToken.

~~An introduction to Web Service Security using WSE - Part I ...~~

In modern web-based applications, the usage of web services is inevitable and they are prone for attacks as well. Since the web services request fetch from multiple websites developers have to take few additional measures in order to avoid any kind of penetration by hackers.

~~Security Testing - Web Service - Tutorialspoint~~

You will gain in-depth experience securing web services, and learn how to integrate robust security measures into the web application development process by adopting proven architectures and best practises. This web service security course includes the OWASP top 10 most critical web application security risks and how to remediate them.
